Integrated Electronics Store Database Management System

Mission Statement

The Electronics Store Management System is a database-driven solution designed to streamline and automate the operations of an electronics retail store. The system will manage key business processes, including inventory tracking, sales processing, customer management, and supplier coordination. By providing a centralized and efficient way to handle store operations, the system aims to enhance productivity, reduce manual errors, and improve overall customer satisfaction.

Mission Objectives

The primary objectives of the Electronics Store Management System are:

1. **Inventory Management** – Maintain accurate stock levels, track product availability, and prevent shortages or overstocking.
2. **Sales Processing** – Automate billing and invoice generation, ensuring smooth and efficient transactions.
3. **Customer Management** – Store and manage customer information, including purchase history and preferences, to improve service.
4. **Supplier Coordination** – Keep track of suppliers and streamline the procurement process for timely restocking.
5. **Employee Records Management** – Maintain employee details, roles, and performance tracking.
6. **Financial Reporting** – Generate reports on sales, revenue, and expenses to support business decision-making.
